SUMMARY

Quality engineering professional with nearly 4 years of experience assuring mission-critical banking and payment security technology for central banks and government clients across four continents. Currently Test Lead for a CBDC client in Malawi and Senior Automation SDET for a Hardware Security Module (HSM) product at IDEMIA, owning test strategy, test planning, regression and non-regression cycles, and release readiness reporting. Hands on in Python, Selenium and Jenkins CI/CD automation, having built a test framework from TDD to BDD and mentored new QA engineers, with a track record of measurable impact (86% test automation, 20% fewer post-release defects, 30% shorter test cycles) and of translating business requirements into test scenarios for client stakeholders in Agile delivery.

TECHNICAL SKILLS

Consulting & Leadership	Quality Engineering	Technical
Test strategy, test planning & entry/exit criteria	Test framework design (TDD to BDD)	Python, Selenium, Jenkins
Test team leadership & release-readiness reporting	Regression & non-regression testing	Git, CI/CD pipelines
Client & stakeholder management	Test case design from epics / user stories	API testing (Postman)
Mentoring & onboarding of new QA engineers	Cross-platform testing (iOS, Android, Web)	MySQL / SQL Server, Data Warehouse / ETL
Agile & DevOps delivery (Scrum)	Defect & test management (Jira)	AI-assisted testing
Multi-engagement delivery	Banking & payments domain (CBDC, HSM, smart card, eUICC)	Web test automation

PROFESSIONAL EXPERIENCE

IDEMIA Technologies Indonesia | September 2023 - Present

Software Development Engineer in Test | Jakarta

- **Test Lead – CBDC CSR Malawi Client (June 2026 - Present):** Lead end-to-end testing for the CBDC CSR deployment for a Malawi client, owning test strategy, test plans, entry/exit criteria, execution and release sign-off. Coordinate a team of mobile and web testers, act as the primary QA contact for client stakeholders, and report quality status, defect trends and release-readiness risks to project management and the client to support go/no-go decisions.
- **Senior Automation SDET – HSM Project (August 2026 - Present):** Manage the majority of regression and non-regression testing for a Hardware Security Module (HSM) product. Design and create test cases from functional specifications, and develop and maintain Python automation integrated into Jenkins CI, automating 86% of test cases.
- **Test Framework Design (TDD to BDD):** Built the test automation framework and evolved it from a TDD approach to BDD, making test scenarios readable to business and client stakeholders and improving reuse across regression suites.

- **QA Mentoring & Onboarding:** Mentor and onboard new QA engineers on test design, automation practices and the team's framework, enabling them to contribute to test delivery independently.
- **AI-Assisted Testing:** Apply AI assistants to accelerate test case design, test script development and defect analysis, increasing team productivity.
- **CBDC Mobile Banking App Testing:** Conducted comprehensive testing for iOS, Android and web applications as part of a Central Bank Digital Currency (CBDC) project. Collaborated with international banks, including the Bank of Canada, and Bank of Israel, to ensure compliance with banking standards and user requirements.
- **Cross-Platform Testing:** Performed manual testing on iOS, automated testing on web, and partial manual testing on Android for features requiring physical interaction with smart cards, ensuring consistent functionality, usability and security across platforms.
- **Jenkins Automation for Android Testing:** Collaborated with the DevOps team to automate the import of Jenkins Android test JSON results into Jira test execution tickets, reducing manual reporting effort by 40% and improving traceability.
- **Test Script Development & Optimization:** Created and enhanced Python test scripts for eUICC 5G SUCI using PyCharm, increasing test coverage and efficiency by 25%.
- **Regression Testing Leadership:** Orchestrated regression testing in PCOM, ensuring software stability and reliability and reducing post-release defects by 20%.
- **Feature Testing Excellence:** Conducted thorough feature testing for smart cards, achieving a 15% improvement in feature integration and functionality.
- **CI/CD & Version Control:** Maintained Jenkins for test automation and managed Git repositories, branching strategies and code merging, working closely with development and DevSecOps teams to ensure continuous delivery.
- **Multi-Project Delivery:** Handle multiple client projects simultaneously while maintaining a high standard of quality, documenting and prioritizing defects to drive effective resolution.

PT Advotics Teknologi Global | December 2022 - June 2023

Software Testing Engineer | Jakarta

- **Automated Testing with Selenium:** Developed and executed automated test scripts using Selenium and Postman, achieving a 30% reduction in testing time and improving test accuracy.
- **API and Database Testing:** Conducted API testing using Postman and database testing with MySQL queries, ensuring data integrity and seamless integration between components.
- **Comprehensive Manual Testing:** Performed manual testing across multiple applications, ensuring adherence to functional requirements and user stories.
- **Defect Management:** Collaborated with development teams to analyze, track and resolve defects, significantly improving software quality and user experience.
- **Test Documentation & Agile Delivery:** Created and maintained test cases, test plans and test reports in Jira, delivering high-quality releases within well-organized Scrum sprints.

KEY ACHIEVEMENTS

- **Client Test Leadership:** Appointed Test Lead for the CBDC CSR Malawi client while concurrently serving as Senior Automation SDET on the HSM project, where 86% of test cases are now automated.
- **Improved Test Coverage by 25%:** Developed and optimized Python-based test scripts for eUICC 5G SUCI, significantly enhancing testing efficiency.
- **Reduced Post-Release Defects by 20%:** Led regression testing efforts, ensuring software stability and reliability.
- **Streamlined Reporting Process:** Automated the import of Jenkins Android test JSON results into Jira test execution tickets, reducing manual effort by 40% and improving traceability.
- **Enhanced Feature Integration by 15%:** Conducted thorough feature testing for smart cards, improving functionality and user experience.

- **Reduced Testing Time by 30%:** Developed and executed automated test scripts using Selenium and Postman, improving test accuracy and efficiency.

EDUCATION

Politeknik STMI Jakarta | August 2018 - December 2022

Information System | Jakarta

Graduated with summa cum laude predicate (3.82 / 4.00)

- **Certification:** Certified Information System Business Analyst by BNSP.
- **Project Leadership:** Led the development and testing of the Wanda FLP App for PT Cheger Motor, enhancing customer engagement.

CERTIFICATIONS

- AWS, Cloud Practitioner Essentials (Course) | November 2021
- BNSP, Certified Development of Information System Business Process | September 2022
- Dicoding, Certified Data Visualization | October 2022
- Dicoding, Certified Python Programming | October 2022
- Google x Coursera, Certified Data Analytics | October 2022
- HackerRank, Certified SQL Basic | July 2022

OTHERS

- **Language:** Indonesian (Native), English (Professional Working)
- **Interest:** Software testing and development, machine learning, data analysis, artificial intelligence
